# VSI CERTIFIED INSTALLERS MAKE THE DIFFERENCE

Your home deserves the best! Whether you're re-siding your home or building from the ground up, the quality of the installation job is just as important as the quality of the product. Improper installation of vinyl siding is the primary cause of poor product performance and customer dissatisfaction. It can even void manufacturer warranties. Using trained, experienced and certified professionals helps ensure that your home's vinyl siding looks great and performs well for many years.

**When you hire an installer certified through the VSI (Vinyl Siding Institute) program, you can rest assured knowing that they're trained to:**

- Correctly fasten siding to allow for vinyl's normal expansion and contraction properties
- Keep vinyl siding straight and secure on walls
- Properly prepare areas around doors, windows and other openings to prevent water infiltration

VSI Certified Installers focus on quality details to give your home a beautiful appearance that lasts.

## THIRD-PARTY CERTIFIED

Vinyl siding is the only exterior cladding with a certified installer program that's validated by an independent, third-party administrator. We provide training and verification processes to ensure our certified installers demonstrate knowledge of industry-accepted application techniques.

# MEETING THE VSI STANDARD

The VSI Certified Installer Program provides experienced professionals with thorough training on industry-approved vinyl siding installation techniques.

*Choose Quality*

## VSI CERTIFIED SIDING PRODUCTS

When you hire a VSI Certified Installer, ensure you're maximizing quality by specifying VSI Certified Products.

Through the VSI Product Certification Program, manufacturers can verify that their products meet or exceed the industry standards for performance and color retention.

Products undergo a series of rigorous tests and unannounced inspections by an independent, accredited quality control agency.

Vinyl siding certified through the VSI program is evaluated to ensure it complies with the ASTM D3679 standard for:

- Weatherability, wind load and impact resistance
- Expansion and shrinkage
- Surface distortion
- Length, width and thickness
- Color retention\*

\*Where applicable

VSI Certified Installer candidates must have at least two years of installation experience, participate in our training course and pass the VSI Certified Installer exam.

Each VSI Certified Installer must demonstrate industry-approved knowledge and skills to properly install vinyl siding and accessories, based on the industry standard ASTM D4756.

After initial certification, installers must apply for recertification every three years to ensure they stay up-to-date on the latest vinyl siding application techniques.
